Outdoor wireless bridge question - what channels? - [Solved]

2019/11/06

Good day Folks! I need a good advice here. Two buildings are going to communicate to each other with high directional dish antennas (Outdoor Long-Range 11ac Access Point/Wireless Bridge). Each antenna has a bandwidth of 867Mbps. I need to get a throughput of 2Gbps in both directions. Three antennas on each building give 2.6Gbps. I decided that there will be channel bonding - 80Mhz wide channels. In this case I can have 6 non-overlapping channels (lets assume it is DFS negotiated). ch 36-48 (-----) ch 52-64 ch 100-112 (-----) ch 116-128 ch 132-144 (-----) ch 149 - 161 Why I am doing this? Well, to avoid co-channel interference. I just assume that in this case I can achieve a throughput of 2Gbps, giving that each antenna is actually MU-MIMO (if this even possible in a Bridge mode with highly directional antennas). Correct me if I'm completely wrong here... Thank you
